

## What to expect from the Best DVD Copy Software

Due to the vulnerability of normal DVD you will always feel safe to have backup copies.&nbsp; Valuable data and information stored on the DVD could be lost due to scratches occurring on the DVD by constant use or the DVD can get damaged even when not in use if kept for a pretty long time.&nbsp; You can of course have back up copies on the hard disk of your computer but again there are the risks of computer hard disk crash and apprehension of loss of data as a result. To make backups you require good quality DVD copying software or DVD burning software.&nbsp; There is not much to differentiate between the two as their functions are mostly identical and interchangeable.

Features of best DVD copy software &ndash;

As customer you may not be satisfied with anything below the best.&nbsp; Therefore you will like to choose the best DVD copy software available in the market.&nbsp; However you should be aware of the features of the best DVD copy software so that selection does not become a problem for you.

Some of the main features of the best DVD copy software or best DVD burning software should be that the software would ensure 100% successful burning rate.&nbsp; It should be able to read and copy any movie or DVDs in any format.&nbsp; Any DVD in whatever format it is should be acceptable to the software and it should automatically format it to be compatible to your system.&nbsp; Best DVD copying software will automatically reformat and reuse the rewritable DVD.

Supporting popular devices &ndash;

In these days of mobile video devices it will also be essential that your DVD copying software is able to conveniently rip and burn to Apple iPod, Sony PSP, and Microsoft Zune and such other devices widely in use among the people. Most important of all the software should be able to make copies of the backups you have already made.

The software should be able to save movies directly to your laptop or PC and must make multiple backup copies of such items to be stored in your hard disk.&nbsp; Capabilities of browsing and viewing the multimedia items on the home networks are important. If your DVD writer has double slots with one reading the DVD to be copied while other burning the blank DVD, it will be very convenient for you.

Compatibility aspects -

One of the problems could be copying damaged or defective DVDs with your best DVD burning software. If your software scans and checks the DVDs to be copied before copying it then not only the defects would be repaired but it will also be able to remove region protection. The software should also be able to support all dual layer as well as the mono layer discs.&nbsp; Capability to back up special features and multi channels would be bonus for you.

The most important factor would be that your DVD copy software should be able to support NTSC, PAL and SECAM so that any DVD in any format from any part of the world could be brought up and copied with it. Similarly it should support the SCSI, IDE, as well as USB burners, records and also writers including all DVD players and the set top players.&nbsp; Last but not the least; your provider company should be ready to provide your technical support on regular basis and your software should have an automatic update feature in built.
